

**VIDEON CENTRAL OFFICE BUILDING,  
STATE COLLEGE, PENNSYLVANIA**

The Videon Central Office Building is a two story steel framed brick veneer office structure, designed for maximum future flexibility and expanding computer operations. An open atrium work area in the central core, with office systems furniture and a raised access floor, provides for easy reconfiguration of the space, and hides all communications and electrical cabling. Water source heat pumps provide for easy future revision to the air conditioning system while minimizing renovation cost and interruption time to the staff. The building design provides for ample natural light into all of the interior work areas via the use of skylights, atriums and open stairways. **HAAS Building Solutions** performed design-build services on this project.
